for those using hearing aids ... and for those who don't

Echo Counter Megaloop

MiniTech Personal Communicator

= £300^{exVAT}

Loop systems offer the crucial sound link between you and someone using a hearing aid. Installed correctly and using the appropriate system, Loops should reduce often disturbing background sounds or noise contamination. This allows the valuable communication link between you and your deaf customers, clients or members of staff. Loop systems have become a very important element in providing services within public buildings, such as reception desks, ticket, bank & library counters, GP surgeries, health centres, hospitals, Government departments etc.

Personal Communicators offer the crucial sound link between you and someone who does not use a hearing aid but has a hearing loss. This may be due to several factors. Hearing aids can sometimes be difficult to use and wear or someone may be prone to ear infections making it difficult for them to wear and/or use a hearing aid. This is an ideal communicator which can be easily transported into interview rooms as well as taken out on visits. For confidential one to one conversations this is a must. Personal communicators are a very fast and reliable way of communication for everyone.

The Disability Discrimination Act 1995, (DDA) It's on it's way and gives deaf people new laws to prosecute 'Service Providers within the private, public, statutory & voluntary sectors'. Providing sound enhancement for deaf people, such as induction Loops & personal communicators makes good practice and more importantly makes life easier for everyone.

Who is

With over 10 years of promoting access to services for D/deaf people and installing professional induction Loops and sound enhancement systems, we are one of very few companies in Scotland who have certified qualifications in all aspects of D/deafness. Recognised as specialists we have written many papers, reports & audits on 'Access to services'. Our work within the private, public, statutory & voluntary sectors and our unique experience in 'Specialist Access & Sound Enhancement' comes from a passion to provide the very highest standards of service, information, advice, support & installation all of which is backed by our commitment to D/deaf people.

Why use

In recent years, especially since the new building regulations and the introduction of the Disability Discrimination Act 1995 (DDA), there has been an increase in the number of inappropriate products and installations, purchased at great expense. Some such systems have never been used after the supply and/or installation due to the lack of staff training and poor product knowledge of how this equipment should be operated. Worse still, clients/customers and staff members, who the systems were intended to help, find that they are ineffective or not operating correctly and still have to suffer and do without as a result. This clearly demonstrates the need to only use experienced persons when dealing in sound enhancement for D/deaf people. It also highlights the importance of adequate staff training.

An official 'Certificate Of Conformity' is issued after every Loop installation we carry out. This is your guarantee that your Loop system has been installed correctly and that the 'Magnetic Field Strengths' have been suitably configured in line with current legislations outlined in the British Standards.

If you would like any additional information and/or advice in any aspect of Specialist Equipment, Loop or Sound Enhancement systems, please do not hesitate to contact us.
